Target Audience for Software

Flipchart notes – HRH Workforce Planning Model Workshop

Different models for different users and purposes

National Level

User		Client
Technical (who will work with client)		Decision makers MOF Medical Professions
This will remain complex		Those who make formal decisions
Within ministry	Outside Technical Advisors	Press (results dissemination)
		Output should be simples, validity (high level)

Secondary Level
District Level

- Fundamentally different models
- Have in/outflows - not useful at national level unless you have it for all districts
- More assumptions needed, complicates things, difficult to get data at district
- Depends on issues you want to address
